# Medications which Interfere with Allergy Skin Tests

Certain over-the-counter and prescription medications contain ingredients which affect allergy skin tests. Check labels of all medications that you are using (including eye drops and nasal sprays) to determine whether your medication contains any ingredient listed below. For questions regarding ingredients, contact your pharmacist. The medications listed must be held for at least the amount of time indicated prior to allergy skin tests.

The following **EYE DROPS** must be held at least **7 days** prior to tests:

**Pataday Patanol Optivar Zaditor Alaway Bepreve Elestat olopatadine azelastine ketotifen Pazeo**

**pheniramine** (e.g. Visine Allergy Eye drops) must be held for **> 48 hours** prior to tests

The following **NASAL SPRAYS** must be held for **>7 days** prior to tests:

**Astelin Astepro azelastine Dymista Patanase olopatidine**

**Psychotropic – Zyprexa, chlorpromazine, Thorazine, perphenazine, Clozaril, and clozapine** may affect allergy tests. These medications should not be modified except by instruction of the prescribing physician. Please notify the clinic in advance of your appointment if you are taking these medications.

If you are taking medication with antihistamine effects which cannot be stopped because of the severity of your condition or any other reason, continue taking the medication and let the clinic know in advance of your initial visit. In most cases, alternative medications which will not affect skin tests can be provided at the time of your initial clinic visit with skin testing postponed for a subsequent appointment.

Medications indicated below do not affect allergy skin tests and **MAY BE CONTINUED**
